# *Activity: Distributed Query Processing*

What are the main differences between these two distributed access plans?

1. Under which assumptions is one or the other better?

```
SELECT *
FROM employee e, assignedTo a
WHARE e.#emp=a.#emp AND
a.responsability= 'manager';
```

Access Plan A

Acces Plan B

AssignedTo (#emp,#proj, responsibility, fullTime)
- S_1: A_1 = AssignedTo(#emp≤'E3')
- S_2: A_2 = AssignedTo(#emp>'E3')

Employee (#emp, empName, degree)
- S_3: E_2 = Employee(#emp>'E3')
- S_4: E_1 = Employee(#emp≤'E3')
